

Brian Alexis Michel

I'm a full-stack developer and frontend lead who enjoys building thoughtful, well-crafted products. I care about clean systems, clear communication, and the space where technology meets human experience.

Outside of work, I'm driven by curiosity, whether that's diving into music, film, psychology, or any idea that feels worth exploring. I believe the best products come from people who stay curious and never stop refining both their craft and themselves.

Technologies I Love

LANGUAGES :

TypeScript, JavaScript

FRONTEND :

React, Next.js, React Native, Expo, TailwindCSS

BACKEND :

Node.js, Bun, MongoDB, PostgreSQL

TESTING :

Jest, Testing Library, Maestro, Cypress

The Story So Far

Frontend & Mobile Lead

belo

February 2026 - Present

- Own frontend and mobile technical direction, driving architecture decisions and defining team standards
- Coordinate cross-functionally with product, design, and backend teams to align priorities and delivery
- Improve development workflows including CI/CD pipelines, testing strategy, and release processes

Senior Frontend Developer

belo

July 2022 - February 2026

- Played a key role in migrating the app from Flutter to React Native/Expo stack
- Built and maintained core features using TypeScript, MobX, Zustand & TanStack Query
- Drove technical decisions and mentored team members through code reviews
- Contributed to improving development practices and app architecture

Full-Stack JS Developer

Digiventures

November 2020 - July 2022

- Worked on a CMS admin platform using Next.js, Redux & Sass
- Developed API endpoints in Next.js with Express.js, using Passport & MongoDB for auth
- Implemented CI/CD with CircleCI for AWS EC2 deployments
- Adapted to the dynamic pace of a startup with focus on async communication

Full-Stack JS Developer

Accenture

September 2019 - November 2020

- Built a SPA from scratch using React, Redux & Material-UI
- Worked with serverless architecture using TypeScript & AWS (Lambda, S3, SecretsManager, API Gateway & DynamoDB)
- Set up deployment pipelines using Azure DevOps & Octopus
- Worked with agile team using SCRUM methodology
